SIEMENS 3844

Desigo™ RXC

# Room controller basic module

**RXC31.1 / RXC31.5** 

for VAV plants,

with LONMARK®-compatible bus communication

The RXC31 room controller is used for VAV room temperature control in individual rooms.

- Control of supply and extract air, with volume control dampers or additional compact VAV controllers, with or without re-heaters
- Can be combined with extension modules for control of lighting and blinds
- Downloadable application software
- LonMark®-compatible bus communications
- For use in the Desigo building automation and control system
- Control of damper actuators with AC 24 V, 3-position or DC 0 ... 10 V control signal
- Control of VAV compact controllers (with differential pressure sensor, volume controller and actuator) with DC 0 ... 10 V signal
- Control of electric or LPHW re-heaters with AC 24 V or AC 24 V 3-position signals
- AC 24 V operating voltage

The RXC31 controller is optimized for the control of variable air volume (VAV) systems. It is suitable for supply and extract air control with volume control dampers or external compact VAV controllers. The controller may also be used for the control of electric or LPHW re-heaters.

The RXC31 can be used in conjunction with extension modules RXC40 and RXC41 allowing additional control of lighting (on/off or dimming) and electric motors for blinds.

The controller application is determined by downloadable application software, also referred to simply as the "application". The various applications and the associated functions are described in detail in the applications library (V1: CA2A3810, V2: CA110300).

The controllers are delivered with basic application 00031. The basic application, which contains only I/O module functions, is overwritten with the definitive application in the commissioning phase. The RXT10 commissioning and service tool is used for this purpose (see "Commissioning").

### Use as an I/O module

In conjunction with a building automation and control system, the RXC31 controller can also be used as a universal I/O module, e.g. to register digital signals or to control various equipment (ON/OFF or pulse control with AC 24 V). In this case the controller is loaded with basic application 00031. The inputs can then be read and the outputs overridden via the building automation and control system.

### **Functions**

The controller functions are determined by the selected application and its parameters. For a detailed description of functions refer to the Desigo RXC applications library (V1: CA2A3810, V2: CA110300).

### Inputs and outputs

Certain input and output parameters can be set for various functions making it possible to cover a wide range of VAV systems. (For parameter settings for the various applications refer to the Desigo RXC applications library (V1: CA2A3810, V2: CA110300).

Input	Function
D1	Occupancy sensor (volt-free contact)
D2	Window switch (volt-free contact)
D3	
X1	LG-Ni 1000 temperature sensor (passive)
	- Air quality sensor (DC 0 10 V)
U1	<ul> <li>Differential pressure sensor DC 0 10 V)</li> </ul>
U2	Differential pressure sensor DC 0 10 V)

Output	Function
YC1	<ul> <li>VAV compact controller, supply air (DC 0 10 V)</li> </ul>
	<ul> <li>Supply air damper actuator (DC 0 10 V)</li> </ul>
YC2	<ul> <li>VAV compact controller, extract air (DC 0 10 V)</li> </ul>
	<ul><li>Extract air damper actuator (DC 0 10 V)</li></ul>
Y1 and Y2	<ul> <li>3-position damper actuators (AC 24 V)</li> </ul>
Y3 and Y4	<ul> <li>3-position damper actuators (AC 24 V)</li> </ul>
Y5	LPHW reheater with thermic valve (AC 24 V, PWM)
Y6	<ul> <li>Radiator with thermic valve (AC 24 V, PWM)</li> </ul>
	<ul> <li>Electric reheater (AC 24 V, on/off)</li> </ul>
Y5 and Y6	<ul> <li>LPHW reheater with motorised valve (AC 24 V, 3-position)</li> </ul>

# Integration into the building automation and control system

When Desigo RXC is integrated into a building automation and control system additional functions become available such as time scheduling, central control of setpoints, etc. (refer to the Desigo INSIGHT documentation for further information).

### **Types**

Туре	SSN	Description
RXC31.1		Room controller, basic module for VAV systems
RXC31.5	S55373-C115	
RXZ30.1		Accessory: Terminal covers

### **Ordering**

When ordering please specify the quantity, product name and type code. The controllers are delivered with basic application 00031.

The RXZ30.1 terminal covers are supplied in packs of 1 pair and must be ordered separately.

### Example:

30	Room controllers for VAV systems	RXC31.5/00031
30	Pairs of terminal covers	RXZ30.1

### Compatibility

The RXC31 can be used in conjunction with extension modules RXC40 for lighting control (data sheet CA2N3842) and the RXC41 for the control of blinds (data sheet CA2N3843). For this purpose, the RXC31 controller must be loaded with an application corresponding to the selected combination. Possible combinations and the associated applications are described in the applications library (V1: CA2A3810, V2: CA110300).

For operation, a room unit from the QAX... series may be used in conjunction with conventional momentary contact switches for lighting and blind control. Alternatively, the flexible room units, QAX50.1 or QAX51.1 may be used.

See the RX hardware overview (CA2N3804) for a summary of the available field devices.

### Mechanical design

The RXC31 controller consists of a housing base, a housing cover and the printed circuit board with connection terminals. The controllers also have a connector base for the extension modules, a tool socket, a service LED and a service pin.

### **Terminal covers**

Terminal covers (RXZ30.1) are available as an option to protect the connection terminals from physical contact and dirt. These covers also provide strain relief for the cables connecting the extension modules. The service LED remains visible when the terminal covers are in place, and the service pin can be operated with a pointed implement. When fitting the terminal covers ensure that they lock into place.

Removing the terminal cover

### Label

Note

Options for use of the labeling fields "Appl." and "Loc.":

- Hand-written entry of the location and the actual application ... or
- Printed adhesive label (printed from the RXT10 commissioning and service tool)

### **Connection terminals**

All connection terminals are detachable plug-in terminals. They are arranged so that, under normal circumstances, all incoming and outgoing cables can be connected without crossing.

The conductors to the connection terminals can be secured with cable ties to the housing base.

### Communication

The RXC31 controller communicates with other devices via the following interfaces:

- LONWORKS® bus (terminals CLA and CLB) for communication with:
  - the PXR system controller or the NIDES.RX interface (to Desigo)
  - other Desigo RXC devices
  - LonMark®-compatible third party devices (e.g. presence detector)
- PPS2 (terminals CP- and CP+):
  - Interface to the QAX... room units. (In addition to PPS2, the LonWorks® bus is also looped to the tool socket on the room unit.)
- Tool socket (RJ45) on the controller or room unit, for:
  - RXT10 commissioning and service tool (LonWorks® bus)
  - RXT20.1 service terminal (PPS2)
- PE bus (plug-in connection): Interface to the RXC40 and RXC41 extension modules.

LONWORKS® bus

The diagram below shows the wiring of the LonWorks® bus and PPS2 interface when a QAX... room unit is connected. It also shows the options for connecting the RXT10 commissioning and service tool and the RXT20.1 service terminal.

### Service LED

The yellow service LED shows the current operational status of the controller by means of different flashing patterns (see the RXT10 user manual, CA110338).

### Service pin

The service pin is used to identify the controller in the commissioning phase. When the pin is pressed the controller's identification number is transmitted to the RXT10 commissioning and service tool.

The devices are classified as waste electronic equipment in terms of the European Directive 2002/96/EC (WEEE) and should not be disposed of as unsorted municipal waste. The relevant national legal rules are to be adhered to.

Regarding disposal, use the systems setup for collecting electronic waste.

Observe all local and applicable laws.

### **Engineering notes**

The Desigo RXC installation guide, document CA110334, contains the relevant engineering information for the LonWorks® bus (topology, bus repeaters, bus termination, etc.) and for the selection and dimensions of connecting cables for the supply voltage and field devices.

See "Connection diagrams" for information on connecting field devices.

### AC 24 V supply

The controller operates with an AC 24 V supply voltage (SELV / PELV). The supply cable must be protected with at least 10  $\rm A$ .

The controlled devices (valves and damper actuators) are supplied directly from the controller. The maximum load on the outputs must not be exceeded (see "Technical data"). The power consumption of the connected devices must be taken into account when sizing the transformer.

### RXC40 and RXC41 extension modules

The plug-in connection for the extension modules incorporates both the communications and the power supply. The power supply is limited to a maximum of two extension modules. The possible combinations are determined by the available applications. See the Desigo RXC applications library (V1: CA2A3810, V2: CA110300).

### AC 24 V triac outputs

- The simultaneous load on outputs Y1...Y6 must not exceed 24 VA
- The maximum load on each output must not exceed 12 VA

### Example

Y1, Y2 (supply air)	1 3-position motorised actuator GDB131E	3 VA
Y3, Y4 (extract air)	1 3-position motorised actuator GDB131E	3 VA
Y5 (Heating)	2 thermic valve actuators, type STP72E	6 W
Y6 (Cooling)	2 thermic valve actuators, type STP72E	6 W
	Y3, Y4 (extract air) Y5 (Heating)	· • • • • • • • • • • • • • • • • • • •

Simultaneous load: 2 motorised actuators (both ON continuously) 6 VA

2 thermic valve actuators \*

6 W (12 W) \*\* 12 W (18 W)

- \* The heating and cooling sequences are never operative simultaneously. Therefore only the actuators for one of the two sequences need to be included when calculating the total load.
- \*\* When cold, thermic valve actuators have a consumption of approximately 6 W. A maximum of two thermic actuators may be connected to any one Y.. output.

### Compact VAV controllers

- If more than two compact VAV controllers are connected to the same output of the controller external auxiliary terminals must be used (only 2 wires per terminal).
- Only compact VAV controllers with a DC 0 ... 10 V signal may be used.

The controller can be mounted in any orientation as follows:

### Rail mounting

The housing base is designed for snapmounting on DIN rails, type EN50022-35x7.5 (can be released with a screwdriver).

### Surface mounting

There are four drill holes for screw mounting (see "Dimensions" for drilling diagram). The housing base is fitted with raised supports.

Screws: Max. diameter 3.5 mm.

When mounting note the following:

- Ensure adequate air circulation to dissipate heat generated during operation.
- Easy access is required for service personnel.
- · Local installation regulations must be observed.

The mounting instructions and a drilling template are printed on the controller packaging.

### Mounting with extension modules

The controller and extension modules (RXC40 and RXC41) must be mounted on the same DIN rail.

Note

If different types of extension module are used they must be arranged in the following order: RXC31  $\rightarrow$  RXC40  $\rightarrow$  RXC41

### Commissioning

The RXC31 controller is commissioned with the RXT10 commissioning and service tool. This is connected to the LonWorks® bus via a tool socket (on the controller or room unit).

The commissioning procedure for the entire Desigo RXC range is described in detail in the RXT10 user manual, document CA110338.

### Labeling

The labeling fields "Appl." and "Loc." on the controller are used to indicate the application actually loaded and the location of the controller, either in writing or by use of printed adhesive labels (see "Label" under "Mechanical design").

### **Function test**

All applications (including basic application 00031) allow direct interrogation of the inputs and control of the outputs using the RXT10 commissioning and service tool. This makes it possible to test the installation and to operate connected plant provisionally before the complete Desigo RXC system is commissioned.

Notes

- The LonWorks® bus plug (terminals 23 and 24) can be removed and reconnected at any time, even while the controller is in operation. Only the original bus plug may be used.
- Overloading the outputs Y1 ... Y6 may cause the thermal fuse to trip and disable the
  controller. When the problem has been solved briefly disconnect and reconnect the
  power supply. The controller will resume normal operation after a delay of
  approximately 10 minutes.

Outputs Y1 ... Y6 are not protected against accidental connection to AC 24 V. This can damage the triacs.

### **Technical data**

Power supply	Operating voltage	SELV / PELV AC 24 V ± 20 %

Notes

- Do not exceed the maximum simultaneous load on outputs Y1 ... Y6 (see "Engineering").
- A power amplifier may be used to connect additional valve actuators to Y5 and Y6 (see Desigo RXC installation guide, CA110334).
- For information on actuators compatible with the RXC31 controller, refer to the relevant application descriptions (see Desigo RXC applications library (V1: CA2A3810, V2: CA110300).
- The AC 24 V supply (G) for devices such as the compact VAV controllers or DC 0 ...10 V damper actuators, for example, can be derived either from the controller or from an external source (see Desigo RXC installation guide CA110334).
   If the connected devices receive their supply from the controller the power consumption of these devices must be taken into account when sizing the transformer.
- The feedback signal (U or UC) from the VAV compact controller is not an essential requirement for the control in the RXC31 controller.

## Parallel connection of several thermic actuators

Up to 2 thermic actuators can be connected directly to the room controller. In the case of more than 2 actuators a power amplifier is required.

The same principle applies to output Y6.

Note that the simultaneous load on outputs Y5 and Y6 must not exceed 9.5 VA.

Power consumption at input X1 of the UA1T: 0.5 VA.

Mixed operation: Connecting thermic actuators to the controller as well as to the power amplifier is NOT allowed.

Differing voltage of the power supply of the controller and the supply of the power amplifier may cause big differences in the position of the valves.

### Connection to controller

N1 RXC31

N2 UA1T (see data sheet CA2N3591)

Y5 AC 24 V thermic valve actuator

Y5.1 AC 24 V thermic valve actuator

Connection to AC 24 V AC 24 V O0105 G

Connection to power amplifier

N1 RXC31

N2 UA1T (see data sheet CA2N3591)

Y5 AC 24 V thermic valve actuator

Y5.x AC 24 V thermic valve actuator (max. 2 STA72E / STP72E actuators per Y1 output on the UA1T)

Notes

- The UA1T requires an AC 24 V supply voltage
- The UA1T is *not* suitable for the connection of 3-position actuators.
