

Modulating control valves with magnetic actuators, PN16

**MXG461..
MXG461..P
MXF461..
MXF461..P**

for chilled and low-temperature hot water systems or
for systems with media containing mineral oils (MX..461..P)

- Fast positioning time (< 2 s), high-resolution stroke (1 : 1000), high rangeability
- Equal-percentage or linear valve characteristic (user-selected)
- Operating voltage AC 24 V
- Switch-selected control signal DC 0/2...10 V or DC 4...20 mA
- DC 0...20 V phase cut control signal with SEZ91.6 external interface
- Indication of operating state, position feedback and manual control
- Wear-free inductive stroke measurement
- Fail-safe feature: A → AB closed when de-energized
- Low friction, robust, no maintenance required

Use

The control valves are mixing or throughport valves with the ready fitted magnetic actuator for position control and position feedback. The short positioning time, high resolution and high rangeability make these valves ideal for modulating

- control of chilled and low-temperature hot water systems
- control or dosing control of fluids containing mineral oil (SAE05...SAE50), mineral-oil-based diesel fuels, heat transfer oils

in closed circuits.

Special silicon-free version available, type suffix ..M.

Application examples MX..461..P

- Temperature control in mixing circuits for motor oil circulation
- Temperature control in mixing circuits for screw-compressors (compressed air)
- Temperature control of fuel circuits in mixing circuits for petrol and diesel oil
- High pressure control for the calibration of components for electronic injection components
- Control of cutting-oil emulsion for industrial grinding machines

Type summary

Type reference		DN	k _{vs} [m³/h]	Δp _{max} [kPa]	Δp _s [kPa]	Operating voltage	Positioning		Spring return

M3P100FY	M3P100FYP	100	130						

¹⁾ for media containing mineral oils

.. = F for flanged valves
G for threaded valves

Δp_{max} = max. permissible differential pressure across the valve's control path, valid for the entire actuating range of the motorized valve

Δp_s = max. permissible differential pressure (close off pressure) at which the motorized valve will close securely against the pressure (used as throughport valve)

k_{vs} = nominal flow rate of cold water (5 to 30 °C) through the fully opened valve (H₁₀₀) at a differential pressure of 100 kPa (1 bar)

High performance range

Type reference	DN	Type suffix	Description	Examples	Datasheet
MXG461..M	15...50	M	Siliconfree grease	MXG461.15-3.0M	N4455
MXF461..M	15...50				
MXG461..U	15...50	U	Set of 3 NPT threaded fittings enclosed	MXG461.15-3.0U	N4455
MXF461..U	65	U	-	MXF461.65-50U	N4455

Accessories

Type reference	Description
ALG..3 (.. = DN)	Set of 3 threaded fittings for 3-port valves, consisting of 3 union nuts, 3 discs and 3 flat seals
Z155/.. (.. = DN)	Blank flange set with blank flange, seal, screws, spring washers and nuts
SEZ91.6	External interface for DC 0...20 V phase cut control signal, refer to data sheet N5143

Order

When ordering, please give quantity, product name and type reference.

Product number	Stock number	Description
MXG461.25-8.0	MXG461.25-8.0	Threaded valve with magnetic actuator
ALG253	ALG253	Set of threaded union fittings
MXF461.20-5.0	MXF461.20-5.0	Flanged valve with magnetic actuator
Z155/20F	Z155/20F	Set of blank flanges

Delivery

Valve body and magnetic actuator form one assembly and cannot be separated.
The threaded fitting sets and blank flanges are packed and supplied separately.

**Replacement
electronics module**
ASE1, ASE2

Should the valve electronics prove faulty, the electronics module must be replaced by the ASE1 (DN15...32) or ASE2 (DN40...65) replacement electronics module.
Mounting Instructions no. 35678 are included.

Rev. no.

See overview, page 14.

Technical and mechanical design

For a detailed description of operation, refer to data sheet CA1N4028E.

Control operation

The electronics module converts the positioning signal to a phase-cut power signal which generates a magnetic field in the coil. This causes the armature to change its position in accordance with the interacting forces (magnetic field, counterspring, hydraulics). The armature responds rapidly to any change in signal, transferring the corresponding movement directly to the valve plug, enabling fast changes in load to be corrected quickly and accurately.

The valve's position is measured continuously (inductive). The internal positioning controller balances any disturbance in the system rapidly and delivers the position feedback signal. The valve stroke is proportional to the positioning signal.

Spring return facility

If the positioning signal is interrupted, or in the event of a power failure, the valve's return spring will automatically close control path A → AB.

Control

The magnetic actuator can be driven by a Siemens controller or a controller of other manufacture that deliver a DC 0/2...10 V or DC 4... 20 mA output signal.
To achieve optimum control performance, it is recommended to use a 4-wire connection.

Manual control

MANUAL

The valve control path (ports A → AB) can be opened manually to between 80 and 90 % of the full stroke (depending on DN) by pressing the hand wheel inwards and turning it clockwise (MANUAL setting). This disables the control signal from the controller, the green LED is flashing.

OFF

To disable automatic control of the valve, press the hand wheel inwards and turn it anti-clockwise (to the OFF position). The valve will close, the green LED is flashing.

AUTO

For automatic control, the hand wheel must be set to the AUTO position (the hand wheel will spring out), the green LED is lit.

Operator controls and indicators in the electronics housing

- 1 Connection terminals
- 2 Hand wheel
- 3 Opening for autocalibration
- 4 DIL switch for mode control

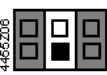

- 5 LED for indication of operating stat

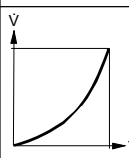

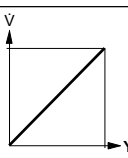

Configuration DIL switches

Switch	Function	ON / OFF	Description
 1	Valve characteristic	ON	\dot{V}_{log} (equal percentage)
		OFF	\dot{V}_{lin} (linear) ¹⁾
 2	Positioning signal Y	ON	DC 2...10 V, DC 4...20 mA
		OFF	DC 0...10 V ¹⁾
 3	[V] or [mA] assignment	ON	[mA]
		OFF	[V] ¹⁾

1) Factory setting

Assignment positioning signal Y: Voltage or current			Selection of valve characteristic (Positioning signal against volumetric flow): Equal-percentage or linear	
 Y	 ON	 ON	 ON	 ON
 ON	0...10 V	2...10 V	 V	 V
 ON		4...20 mA		

Forced control input YF

		YF – Function		
		no function	fully open	closed
Connections				
Transfer				
Function			<ul style="list-style-type: none">• YF not connected• valve will follow the Y-signal	<ul style="list-style-type: none">• YF connected to G• valve will fully open control path A → AB

Signal priority

1. Hand wheel position MANUAL (open) or OFF (close)
2. Forced control signal YF
3. Signal input Y

Calibration

The MX..461.. and MX..461..P magnetic valves are factory-calibrated at 0 % and 100 % stroke.

When commissioning the valves, however, (especially under extreme conditions of use) there may still be some leakage via control path A → AB with a 0 % stroke control signal (DC 0 V, DC 2 V or DC 4 mA).

In this case, the valve can be recalibrated simply and quickly:

1. Hand wheel [2] in AUTO-position
2. Use a pointed implement (ø 2 mm) to operate the button in the opening [3] once
3. While recalibration is in progress, the LED [5] is flashing green for approximately 10 seconds.

The valve will be briefly closed and fully opened.

If the electronics module is replaced, the valve's electronics must be recalibrated. For that, the hand wheel must be set to AUTO.

Indication of operating state

The two-color LED display indicating operating status can be viewed by opening the cover of the electronics module.

LED	Indication	Function	Remarks, troubleshooting
Green	Lit 	Control mode	Automatic operation; everything o.k.
	Flashing 	Calibration In manual control	Wait until calibration is finished (green or red LED will be lit) Hand wheel in MANUAL or OFF position
Red	Lit 	Calibration error Internal error	Recalibrate (operate button in opening 1x) Replace electronics module
	Flashing 	Mains fault	Check mains network (outside the frequency or voltage range)
Both	Dark 	No power supply Electronics faulty	Check mains network, check wiring Replace electronics module

As a general rule, the LED can assume only the states shown above (continuously red or green, flashing red or green, or off).

Sizing

Flow chart

Δp_{V100} = differential pressure across the fully open valve and the valve's control path A → AB by a volume flow \dot{V}_{100}

\dot{V}_{100} = volume flow through the fully open valve (H_{100})

Δp_{max} = max. permissible differential pressure across the valve's control path for the entire actuating range of the motorized valve

100 kPa = 1 bar ≈ 10 mWC

1 m³/h = 0.278 l/s water at 20 °C

Note for media other than water

When sizing valves for media other than water, note that the medium properties

- specific heat
- density
- kinematic viscosity

differ from water. All variables depend on temperature. The design temperature is the lowest medium temperature in the valve.

Note on viscosity

Viscosity may change considerably on temperature changes depending on the medium. Plant functionality may be impaired if the medium temperature does not guarantee viscosity values compatible with troublefree valve functioning.

Kinematic viscosity
 $\leq 10 \text{ mm}^2/\text{s}$

Kinematic viscosity ν [mm^2/s] in HVAC plants always is lower than $10 \text{ mm}^2/\text{s}$, i.e. its influence on volume flow is negligible.

$> 10 \text{ mm}^2/\text{s}$

For details please contact your local Siemens branch office.

S_{NA} = nominal apparent power for selecting the transformer

P_{med} = typical power consumption

S_{TR} = Minimal required transformer power

I_N = required slow fuse

L = max. cable length; with 4-wire connections, the max. permissible length of the separate 1.5 mm^2 copper positioning signal cable is 200 m

¹⁾ All information at AC 24 V

Engineering notes

Conduct electric connections in accordance with local regulations on electric installations as well as the internal or connection diagrams.

Attention

Observe safety regulations and restrictions designed to ensure the safety of people and property at all times!

Fit a strainer upstream of the valve to increase reliability.

Mounting notes

Mounting and operating instructions are printed on the actuator and on the electronics module.

Caution

The valve may only be used as a mixing or throughport valve, not as a diverting valve. Observe the direction of flow!

A strainer should be fitted upstream of the valve. This increases reliability.

Orientation

Degree of protection valid only with M20 cable gland supplied by the installer.

Access for installation

It is essential to maintain the specified minimum clearance above and to the side of the actuator and/or electronics module! (refer to "Dimensions", page 12)

DN15...DN32 = 100 mm

DN40...DN65 = 150 mm

Use as straight-through valves

Only three-way MX..461.. valves are supplied. They may be used as straight-through valves by closing off port "B".

MXG461.. threaded valves in straight-through applications

Port "B" can be sealed with the accessories supplied (cover, gasket) and the union nut of the ALG..3 coupling.

MXF461.. flanged valves in straight-through applications

Port "B" can be sealed with part Z155/.. which must be ordered as a separate item.

The part comes complete with blank flange, seal, screws, spring washers and nuts.

DN15...DN32 blank flange (Z155/15F..Z155/32F)

DN40...DN65 blank flange (Z155/40..Z155/65)

Installation notes

- The MXG..461.. valves are flat-faced allowing sealing with the gaskets provided with the ALG..3 set of 3 threaded fittings.
- Do not use hemp for sealing the valve body threads.
- The actuator may not be lagged.

For notes on electrical installation, see "Connection diagram".

Maintenance notes

The valves and actuators are maintenance-free.

The low friction and robust design make regular servicing unnecessary and ensure a long service life.

The valve stem is sealed from external influences by a maintenance-free gland.

If the red LED is lit, the electronics must be recalibrated or replaced.

Repair

If the valve electronics prove faulty, the electronics module must be replaced by the ASE1 (DN15...32) or ASE2 (DN40...65) replacement electronics module. Mounting instructions no. 35678 are included.

Caution

Always disconnect power before fitting or removing the electronics module.

After replacing the electronics module, calibration must be triggered in order to optimally match the electronics to the valve (refer to "Calibration", page 5).

Caution

Under operating conditions within the limits defined by the application data, the actuator will become hot, but this does not represent a burn risk. Always maintain the minimum clearance specified, refer to "Dimensions", page 12.

Disposal

Do not dispose of the actuator in domestic waste. This applies in particular to the PCB. The law may demand special handling of certain components, or it may make environmental sense.

Observe all current local laws.

Warranty

Observe all application-specific technical data.

If specified limits are not observed, Siemens Switzerland Ltd / HVAC Products does not assume any responsibility.

Connection diagrams

Caution ⚠

If controller and valve receive their power from separate sources, only one transformer may be earthed on the secondary side.

Terminal assignment for controller with 4-wire connection (to be preferred!)

Common transformer

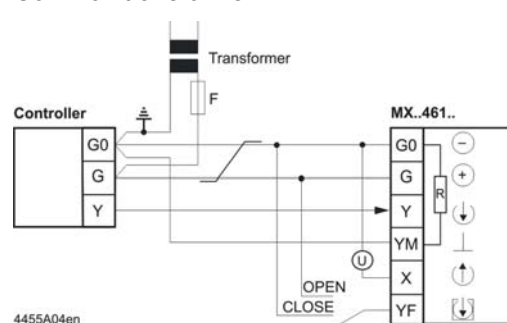

Separate transformer

Terminal assignment for controller with 3-wire connection

Common transformer

Indication of valve position (only if required). DC 0 ...10 V → 0...100 % volumetric flow V_{100}

Twisted pairs. If the lines for AC 24 V power supply and the DC 0...10 V (DC 2...10 V, DC 4... 20 mA) positioning signal are routed separately, the AC 24 V line need not be twisted.

Warning

Piping must be connected to potential earth!

DIL switch

Factory setting: Valve characteristics equal-percentage, positioning signal DC 0...10 V.
Details see "Configuration DIL switches", page 4.

Calibration

See "Calibration", page 5.

Application examples

Hydraulic circuits

The examples shown below are basic diagrams with no installation-specific details.

Caution 

The valve may only be used as a mixing or through-port valve, not as a diverting valve. Observe the direction of flow!
